AutoCAD Architecture is used for the following purposes: Cad drafting to draw, mark up and edit the plan, elevation and section drawings of structural steel members, building components and fittings. Coordinate design and development of a project. For ease of design process. To reduce the number of drafts and support the design team. Showcase plans, elevations, sections and sections in any presentation format and media. Allow users to understand their structural design. To eliminate the need for visual communication between the design team and the engineering team. But one key element in the recovery from the global downturn remains unchanged: the world is still growing, even as it slows down. Strong global trade growth will deliver economic benefits over the next few years, but not many more. In the past five years, the global economy has grown at an average rate of 2.7 per cent a year. Assuming this continues, the world economy will grow by about 1.8 per cent this year, a pace that should have a positive effect on commodity prices. It is uncertain, however, whether global trade can stay this strong. The WTO expects world trade to pick up at an average annual pace of 2.6 per cent for 2011 and 2012, but to decline to 1.9 per cent in 2013, from 1.8 per cent in 2012. That implies an annual pace of 2.2 per cent over the next two years and a modest rise to 2.7 per cent in 2013. That is still a healthy level for trade. But it is also not growth that is generating the profits needed to fuel global demand. The profits have to come from somewhere, and the single place that has been consistent is the capital sector. The OECD expects trade to return to a level of profit of about 8 per cent in the current year, the same level as in 2007, and rising to 10 per cent in 2011 and 2012. Yet the OECD also expects capital income to rise by only 1.9 per cent in the current year, to 2.7 per cent in 2011 and 2012, and by 2.4 per cent in 2013. That is a much smaller rise than the profit growth, and suggests that the profits need to come from somewhere other than trade or capital income. Why is global trade, for all its many strengths, not providing the source of global profits, or is it? The answer lies in the structure of the world economy. The main source
