Q: how to retrieve date from mysql using table column I have a table name incident and columns are id int(11) NO PK date timestamp NOT NULL I am inserting a value like 5/29/2012 12:00:00 AM how do i retrieve the same? i have tried select * from incident where id='3' but it does not return values where date = '5/29/2012 12:00:00 AM' i want to pick up the record where date is 5/29/2012 i want to retrieve the record from data base for 5/29/2012 how do i retrieve my records using php A: You could try something like this: SELECT id, DATE(date) FROM incident WHERE date='5/29/2012 12:00:00 AM'; Or just DATE(date), whichever you like to use. In the example, '5/29/2012 12:00:00 AM' is being put in the field data using an SQL statement like this:

```
UPDATE incident SET date = '5/29/2012 12:00:00 AM'; //
```

----- #pragma once  
#include #include "Actor.h" #include "ActorComponent.h" #include  
"HitPointComponent.h" class ActorComponentIterator { public:  
    ActorComponentIterator(Actor* actor, const std::array&  
        components) : actor(actor), components(components),  
index(components.size()) { } ActorComponentIterator(Actor* actor,  
    ActorComponent* component) : actor(actor),  
        components(ActorComponent::Components),
```

```
index(components.size()) { this->components[index] = component; }  
ActorComponentIterator(ActorComponent* component) :  
    595f342e71
