## Baisvik Disk Cleaner

Baisvik Disk Cleaner -is an intuitive application, capable of scanning the selected computer drives and detect unnecessary, temporary or junk files, then cleaning them. Unused files can take up much hard disk space and memory, causing your computer to work slowly. Additionally, the processor is affected, on long term. The effective disk scanner Baisvik Disk Cleaner offers you three types of drive analysis: the fast, standard or full scan. The quick scan searches through the current user directory, the Internet browsers cache, history, Recycle Bin and Windows temporary folder, in order to find junk files. When the scan is complete and the results are displayed, the software enables you to select certain categories and delete the files. The number of files, along with the occupied space, are also displayed, in order to indicate how much computer space you can clear by deleting the files. Standard and full scan functions The standard scan implies that you select which drives you wish to analyze, as well as the type of files you wish to include in the search. Thus, the considered categories include Internet browsers cache, cookies, temporary files saved by programs, log files or histories. Similarly to the process performed by the Quick scan, the software enables you to monitor the progress of the drive analysis, then view the results and decide which category of files you wish to delete. The software only allows you to delete batches of files, not individual documents. Additional functions The Full scan mode implies that you can analyze all the drives on your computer and apply search filters. Thus you can include or exclude backup files, database temporary documents, disk checks, dumps, installation backups, search results, recovered parts of files or thumbnails. Moreover, you can select certain folders or drives, in order to exclude them from the scanning processes. Additionally, you can include read-only types or empty files to the search, as well as ignore those documents that were accessed in the past few days. Conclusion Baisvik Disk Cleaner is a useful application designed to help you improve your computer's performance by cleaning its drives from unnecessary files. You may clear away hard disk space or memory space and enable your system to run more smoothly. Junk files, such as temporary browser documents, caches, cookies, thumbnails or histories may take up otherwise useful space and slow down your computer.
